

Spotwave brings the outdoor signal inside – giving you clear voice call quality and high speed data rates

## Product Benefits

- Cost-effective targeted coverage - only where you need it
- Everything you need for rapid deployment in an out-of-the-box solution
- Easy to install - no special skills or equipment required
- Once installed it's maintenance free
- Field upgradeable Personality Module™ effectively future-proofs the system as network configurations change

## Wireless for Where you Work

Your company's business applications are going mobile. Perhaps you're thinking about implementing wireless applications to improve productivity and gain competitive advantage. More likely your organization already depends on wireless technology to increase efficiency and mobility. If your organization is already using wireless for business initiatives such as salesforce automation and customer service accessibility, fleet management or location based services, you expect your wireless devices to work indoors.

The requirement for wireless communication is often tempered by limited resources, creating the need for a reliable and cost-effective wireless strategy. The business benefits of wireless use are clear, but often the indoor wireless coverage required to use this technology is not.

That's where Spotwave comes in.

## The Issue

Great coverage outside doesn't always mean great coverage inside. Materials such as concrete, tinted glass, and building location can create indoor coverage gaps. We've all experienced the frustration of dropped calls or poor reception indoors. When this impacts your business investment in wireless technology, a solution is required. Spotwave overcomes the barriers to poor indoor coverage with a simple, affordable, effective solution, approved by your wireless carrier.

For most offices, providing cross-building coverage can be a simple and affordable investment. Most businesses only need to improve coverage in targeted locations in order for staff to communicate effectively without having to leave their workspace.

## Spotwave's Solution

SpotCell® indoor coverage systems from Spotwave seamlessly bring the outdoor signal inside - ensuring your wireless devices work reliably indoors where they are used most often. Our solution is ideal for organizations looking to quickly and cost-effectively enhance indoor wireless connectivity in spaces ranging from 5,000 to 500,000 sq ft.

## Benefits to your Business

- Maximize your investment in wireless technology by ensuring devices can be used indoors
- Expedite communications and responses between management and plant floor staff
- Ensure mobile workers working with multiple departments in multiple locations have reliable cell phone coverage
- Immediate access to critical data and messages
- Ensure security and safety for staff and visitors in areas such as stairwells and parking garages
- Ensure security and safety for staff located in isolated work areas

## Carrier Grade Technology

Our products are carrier-specific to ensure the best signal integrity, supporting CDMA and GSM technologies and all carriers operating in North America. Once installed, our SpotCell® systems require no maintenance or adjustments and are guaranteed to maintain signal integrity under a broad range of conditions.

## The Carrier-Approved Difference

Spotwave Wireless has the only out-of-box solution certified by carriers across the continent. Carriers have invested billions of dollars for their wireless spectrum - their most valuable asset. They are also legally responsible for ensuring they do not interfere with another carrier's spectrum. This means you're prohibited from deploying or using any product which could interfere with your carrier's, or another carrier's network. Even FCC and other regulatory approvals do not guarantee a product is compatible with a carrier's network, nor do they mean a product is certified and approved by a carrier.

Maintaining carrier network integrity is not a concern if you deploy a SpotCell® indoor coverage system. Spotwave has worked closely with carriers to determine what impacts their networks, and goes well beyond minimum requirements for coverage enhancement - ensuring products will never interfere with a carrier network. This peace of mind is a critical consideration for your business.

## Our Enterprise Deployments

Our customers are organizations which do business wirelessly. From hospitals to manufacturers, IT companies and retail stores, we've had thousands of successful deployments. Whether the coverage problem is in a conference room, a manufacturing floor, a hospital wing or a home office, we provide our customers with carrier-approved seamless coverage where they need it, when they need it, and our customers agree our approach to seamless coverage is second to none.
