

Spotwave brings the outdoor signal inside – giving you clear voice call quality and high speed data rates

Product Benefits

- Cost-effective targeted coverage - only where you need it
- Everything you need for rapid deployment in an out-of-the-box solution
- Easy to install - no special skills or equipment required
- Once installed it's maintenance free
- Field upgradeable Personality Module™ effectively future-proofs the system as network configurations change

Wireless for Where you Work

Hospitals and other healthcare facilities have emerged as some of the leading buyers of wireless technology, and with good reason - there are countless stories of how the use of a wireless device helped to save a life.

Hospitals across the country are adapting their clinical systems to wireless networks in order to achieve important business goals, directly at the point of care. Organizations like HIPAA Compliance invest in providing wireless application software used by healthcare workers to access clinical data. Many healthcare organizations are using this and other opportunities to work more efficiently by developing advanced solutions.

Mobile database solutions allow physicians to make faster decisions toward improved patient care. The business benefits of wireless technology in the healthcare field are clear, but often the indoor wireless coverage required to use the technology is not.

That's where Spotwave comes in.

The Issue

More wireless technologies are being deployed in hospitals and healthcare facilities, however many of these are located in buildings where wireless coverage is a problem. Building materials used in large healthcare structures and populated urban centers can create physical barriers leading to indoor coverage gaps.

For most healthcare locations, providing cross-building coverage can be a simple and affordable investment. Most hospital and healthcare units only need to improve coverage in targeted locations in order to access important information and communicate effectively.

Spotwave's Solution

SpotCell® indoor coverage systems from Spotwave seamlessly bring the outdoor signal inside - ensuring your wireless devices work reliably indoors where they are being used most often. Our solution is ideal for organizations looking to quickly and cost-effectively enhance indoor wireless connectivity in spaces ranging from 5,000 to 500,000 sq ft.

Benefits to your Organization

- Maximize your investment in wireless technology by ensuring devices can be used indoors
- Immediate access to medical records, benefiting both patients and doctors
- Expedite response time of healthcare workers in emergency situations
- Make specific areas "wireless friendly" without compromising critical medical devices
- Ensure security and safety for your employees and visitors in areas like stairwells and parking garages

Carrier Grade Technology

Our products are carrier-specific to ensure the best signal integrity, supporting CDMA and GSM technologies and all carriers operating in North America. Once installed, our SpotCell® systems require no maintenance or adjustments and are guaranteed to maintain signal integrity under a broad range of conditions.

The Carrier-Approved Difference

Spotwave Wireless has the only out-of-box solution certified by carriers across the continent. Carriers have invested billions of dollars for their wireless spectrum - their most valuable asset. They are also legally responsible for ensuring they do not interfere with another carrier's spectrum. This means you're prohibited from deploying or using any product which could interfere with your carrier's, or another carrier's network. Even FCC and other regulatory approvals do not guarantee a product is compatible with a carrier's network, nor do they mean a product is certified and approved by a carrier.

Maintaining carrier network integrity is not a concern if you deploy a SpotCell® indoor coverage system. Spotwave has worked closely with carriers to determine what impacts their networks, and goes well beyond minimum requirements for coverage enhancement - ensuring products will never interfere with a carrier network. This peace of mind is a critical consideration for your organization.

Our HealthCare Deployments

Our customers are organizations trying to leverage wireless technology and improve communication quickly and affordably. Whether the coverage problem is in a board room, emergency room, or waiting area, we provide our customers in the healthcare field with carrier-approved seamless coverage where they need it, when they need it. And our customers agree that our approach to seamless coverage is second to none.
