

Manufacturing and Warehouse Case Study

“Without the SpotCell® units, we would be unable to take advantage of the cellular system in our manufacturing facility. Prior to installing the SpotCell® units, we were required to use a paging system that was noisy and disruptive and was a one-way communication tool, causing delays in response times. Spotwave has greatly improved our in-building communications.”

John Charleson
Director of Information Technology
Canac Kitchens

The Customer - Canac Kitchens

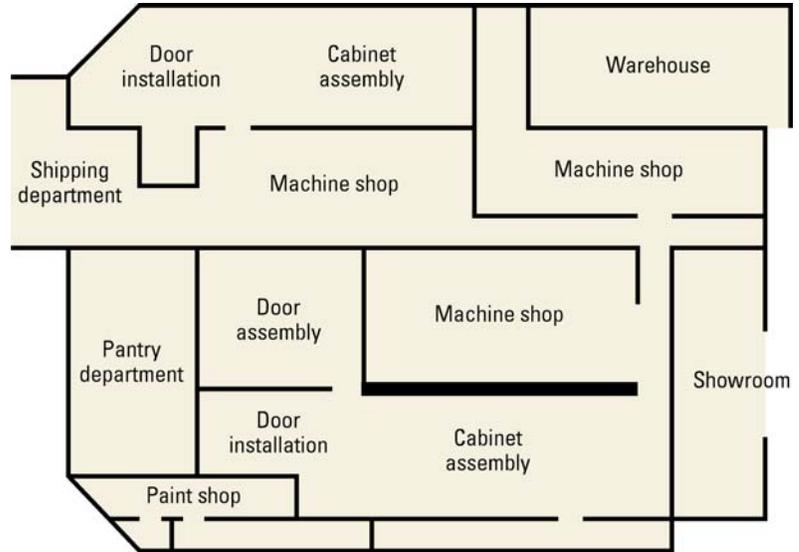

Canac Kitchens is a cabinet manufacturer and a subsidiary of Kohler Co., a world leader in products for the kitchen and bath, and one of the oldest and largest privately held companies in the United States. Canac's 250,000 square foot facility just north of Toronto, Ontario, houses the manufacturing plant, head office and training facilities.

The Challenge

The Canac facility has grown to its present size through a series of additions - the building has several concrete walls and multiple mezzanines. The plant space is severely constrained and materials are stacked to the ceiling. Canac required cell phone coverage to ensure consistent flow of information to and from the staff on the floor.

The Solution

A site evaluation was conducted throughout the plant to determine the best solution. Three SpotCell® 100 indoor coverage systems were installed in the assembly and machine shop areas.

The Results

Thanks to Spotwave technology, Canac now has reliable wireless communications throughout their manufacturing facility. This allows for seamless communication between staff on the plant floor, and also for all staff throughout the facility.
